

Challenge

Task 1 - Create an angular application and try sample ngClass syntax to add background colour on a "div" and "H1" tag (based on a variable in component file, for example if name = "Tom" or a boolean variable show = true)

Task 2 - Try multiple syntaxes of ngClass

Task 3 - Create a new component and add input type text and bind it to a variable - Also interpolate that variable in html and see that as user types value in the variable, the latest value is displayed in html also

Task 4 - Create a registration component and make user enter various fields like name, email, password and display the entered values in console using a button click

Task 5: Create an Angular application with a button and a paragraph. Use ngClass to dynamically change the color of the paragraph text based on a boolean variable. When the button is clicked, toggle the boolean variable to change the text color.

Note : There will be No support provided by the trainers for the tasks

Challenge

Task 6: Create an Angular application with a textarea and a button. Utilize ngModel to bind the textarea value to a variable in the component. When the button is clicked, display the entered text in an alert dialog box.
