

## Challenge

---

Task 1 - Using angular CLI create a new component in a new project and display that component in html (using selector tag).

Task 2 - Create a new component named LoginComponent and design it to look like a login page and display it in our angular application.

Task 3 - Create a new component and use ngIf to hide and show a welcome message based on button click (Toggle functionality).

Task 4 - Create a new Angular project using Angular CLI. Generate a new component called "NavbarComponent" and add it to the main application layout (e.g., app.component.html) using its selector. Display a simple navigation bar with links to different sections of your application.

Note : There will be No support provided by the trainers for the tasks
